Introduction

1. Background And Methodology

This document presents the results extracted from various sources; business processes, stakeholders' requirement elicitation sessions.

The group does not currently deploy an ERP software to manage its business transactions; hence, it requires a robust system that will integrate all the functional areas of the business while providing a framework to make informed business decisions as a going concern.

The company (MEG) searched for applications that will enforce best practice business processes, and Odoo is viewed as a system that can meet its expectations and requirements. Matt O'Bell Ltd (as one of the leading partners of Odoo in Nigeria) has been contracted by MEG to implement the Odoo ERP solution for the organization.

The information contained in this document is a result of various elicitation techniques carried out by Matt O'Bell Ltd to understand the current workflow/processes of MEG and areas where there are needs of improving these work processes for better business practice. Therefore, this document delivers a comprehensive analysis of the MEG business processes and the expected Odoo implementation deliverables.

The modules required by MEG to achieve the above includes:

Accounting	**Invoicing**	**Inventory**
Maintenance	**Manufacturing**	**CRM**
Purchase	**Sales**	**Timesheet**
Email Marketing	**Expenses**	**Appraisal**
Leaves/Time-off	**Recruitment**	**Payroll**
Social Marketing	**ESign**	**Quality**
Marketing Automation	**Document Management**	**Helpdesk**

Human Resources	**Employee Referral**	**Fleet Management**
Project	**Studio**	**Planning**
Approvals	**Consolidation**	**VoIP**

Table 1: Modules required by MEG

This report represents the outcome of the analysis of the current business processes of MEG, and how these processes are mapped to the functionalities of Odoo.

In carrying out the analysis, input was received from key stakeholders, and processes for each business unit were reviewed.

The business Analysis document is not a confirmation that all the requirements and functionality captured and requested by MEG will be delivered in the project. It is expected that management upon review of this document will decide on the requirements that should be implemented and this will further be documented in a Software Requirement Document (SRD) and signed off by both MEG and Matt O' Bell Ltd.

The Software Requirement Document also serves as a baseline for the project and any further change will be discussed as part of a new request outside the scope of the current project.
The final solution deliverable when completed is expected to:

- ✓ Enhance operational efficiency
- ✓ Integrate business processes of each department in the companies
- ✓ Improve customer relation management
- ✓ Timeliness and efficiency in delivering management reports

2. Executive Summary

Please note that we have a generic workflow for all plants because of the similar SOPs used by all the companies. This implies that this document is for the three functional companies.(PVC, Plastics and Masters Noodles)

Please also note that this is a supporting document to show the flow charts derived from the BA document that was initially sent to you. The BA document would be signed off accompanied by this flow chart document.

3. Stakeholder Analysis

Enterprise Resource Planning systems integrate touchpoints in an organization, including customers and suppliers. It is important to understand the roles and responsibilities of every stakeholder in the system, thereby enabling the accurate delivery of usable and robust organizational management applications.

Stakeholder List, Roles, and Responsibilities

S/N	ROLES	Names	Responsibilities RACI
1.	**Project Sponsor**	Mr. Akajiaku Nwabekee	A
2.	**Domain Subject Experts**		
	Operations	Head of Operation	R, C, I
3.	**End Users**		R, I
4.	**Customers**	All	I
5.	**Suppliers**	All	I

Table 2: Stakeholder lists, roles, responsibilities

RACI MATRIX
[R]esponsible, does the work
[A]ccountable, is the decision-maker (Only One)
[C]onsulted, must be consulted before work and gives input
[I]nformated, must be notified of the outcome

Table 3: RACI Matrix

4. Business Process Requirements Analysis

This document will present the required functionalities and processes that will be implemented in Odoo Version14, based on agreed business processes from all the departments at Masters Energy Group.

Benefits

- To Analyze and interpret the company's business processes on the Odoo ERP system.
- To capture the information required for deploying Odoo V14 to suit business and operational needs.
- To describe the functionalities in the ERP.

Company Setup & Configuration: An Overview

The following configuration will be done on the system:

Company Related Information:

The setup of the Finance & Account module will be implemented for the companies within Masters Industrial City, for Masters Energy Group.

- Masters Noodles & Food Processing Limited
- Masters PVC Limited
- Masters Plastics Limited

Numbering Sequence:

The Number sequence for transactions on the system will be auto-generated by the Odoo based on the pre-defined numbering that will be specified during setup.

Dimensions:

Dimensions will be used to analyze all posted transactions in the ERP. Below are the various dimensions that will be used to analyze the transactions for Master Energy Group.

Departments:

- Finance & Account Management
- Human Resource Management
- Manufacturing / Processing Management
- Procurement Management
- Customer Relationship & Sales Management
- Warehouse Management
- Maintenance Management

Financial Year

Accounting periods for each fiscal year will be defined during setup, periods are viewed according to how they are specified on the Odoo ERP, either by day or by month. The Fiscal year-end will be April 30th.

Currency setup

The reporting currency for the system will be Nigerian Naira (NGN) and United State Dollar (USD) because the company operate on Nigeria and United State Currency. The currency will be configured on the currency's setup of the Odoo ERP.

Finance and Accounts Department

Business Process Description

Finance & Accounts at MEG will play a vital role in the management of the company's business and this mainframe is based on how financial transactions are tracked and recorded.

Odoo will streamline and automate several accounting operations such as Accounts Receivable, Accounts Payable, Cash Management, Bank Reconciliation, Inventory, Fixed Asset, and Budgeting.

Key Processes:

Preparation of Petty Cash

Petty Cash in MEG is an act of managing cash that is given to the petty cashier and the retirement must be done accurately, this goes through some approval process before the cash is given.

Key Tasks Performed

1. Staff requests for petty cash reimbursement and sends to HOD for approval
2. HOD approves and sends to the audit department to check for confirmation
3. Upon the Audit department's confirmation, a request is sent to the plant manager for approval
4. Upon the Plant manager's approval, the request is sent to the Audit department at the Head office for approval
5. Upon Head Office's Audit department's approval, a request is sent to Head office Finance for the final approval

6. Upon Head office's finance approval, the payment is made to the requester by the accountant
7. The accountant will post the journal entry.

Process Flow Diagram

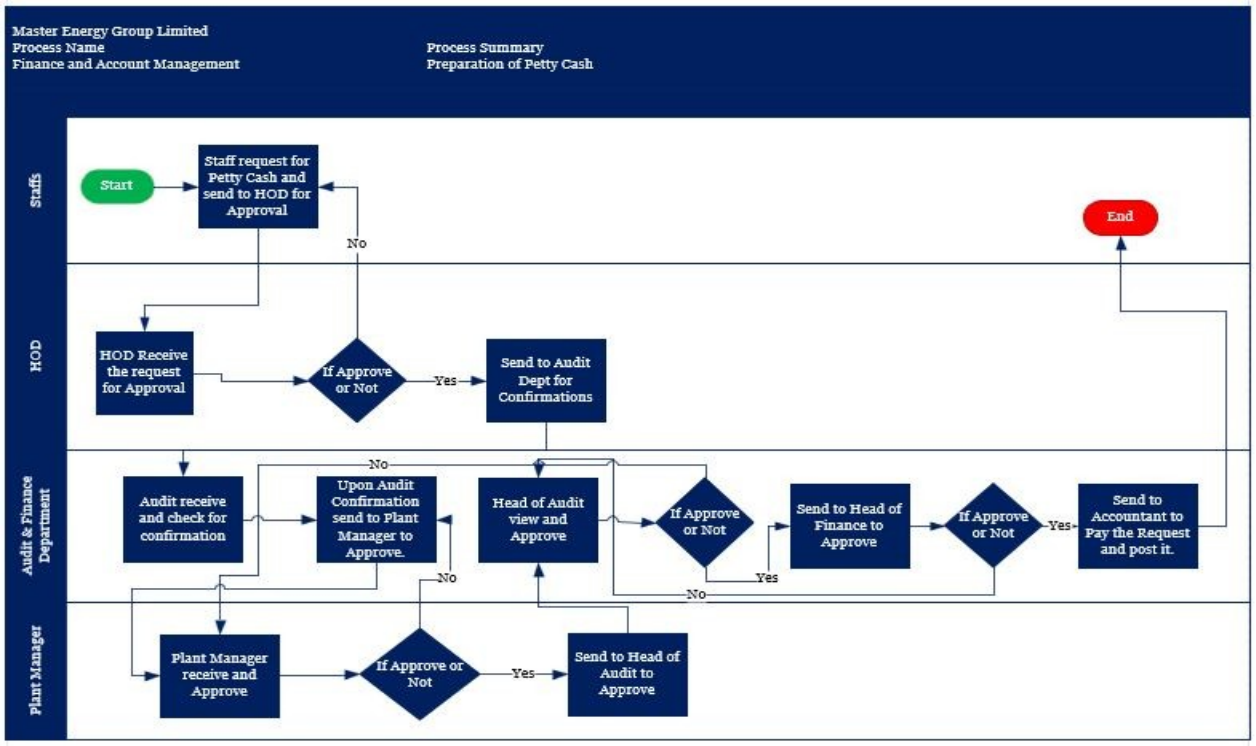

Fig 1: Petty Cash Representation

Company Payment

Key Task Required for the company payment process

1. The accountant raises the payment, goes to Audit for validation
2. Audit validates the request, then the request proceeds to the plant manager for approval.
3. If payment is above ₦100,000.00 (Hundred Thousand Naira):
4. It goes to the Group Head Audit at the Head office for approvals
5. Upon approval by the Group Head Audit, it goes to the ED in charge of the industrial city for approval,
6. Upon approval by the ED by the ED industrial city, it goes to the GMD
7. Upon approval by the GMD, it goes to the Head of Finance for final validation

Process Flow Diagram

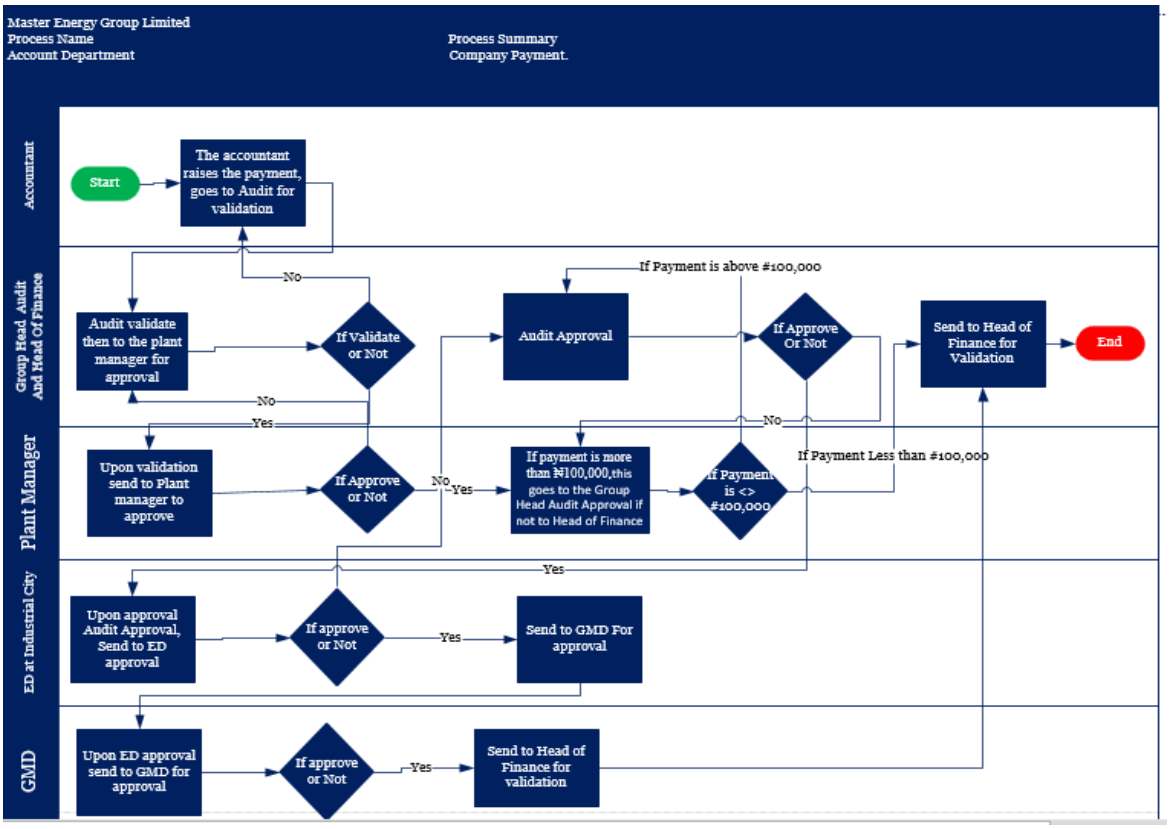

Fig 2: Company Payment Representation

Modules Required

1. HR module
2. Accounting Modules

Reports

1. Trial Balance
2. Balance Sheet
3. Profit & Loss
4. Statement of Cashflows
5. Budget Report
6. Account Schedules

7. Customer – Balance to date
8. Vendor – Balance to Date
9. Fixed Asset Report

Financial Reports:

1. Generate cash-flow report
2. Income Statement
3. Statement of financial position
4. Statement of changes in equities

ACCOUNTING/ BANK:

To manage the Bank Account the following are required:

- ✓ Currently, bank transactions are posted as payments, the payment charges are managed using the payment receipt.
- ✓ Currency symbol or description should be in a bracket for each of the accounts created especially on the accounting dashboard.
- ✓ Cash in transit account to be used for the monies received in the office. It should be a cash account and should also appear on the dashboard.
- ✓ Give access to the accountant to manage bank reconciliation.
- ✓ Manage all the various assets and consumables to know where they are at any time.
- ✓ Set up Bags, Fans, Tools, Testers, Chairs, etc. as consumables and keep them tracked.
- ✓ Fixed Assets register should be kept and monthly depreciation done automatically by the system.
- ✓ Budget management should be available.
- ✓ The system should be able to manage loans for both staff and external parties.
- ✓ Posted journals should not be editable unless via approval from the Head of Finance at Head office.

Human Resources Management

Business Process Description

Human Resource processes in Masters Noodle and Food Processing Limited involve managing Employee Recruitment, Employee Information, Appraisal, Training and Leave as well as Employee Exit. The Department will also manage the Payroll processes and ensure that all statutory payments are made by Finance & Accounts Department.

Key Processes

Employee Payroll Management

The payroll structure consists of the Earnings and Deductions which will be set up for each Employee. The payroll will be run by the Human Resource Manager and Pay-slips will be sent to Employees via mail.

Key Task Performed

1. Human Resource Officer updates employee's monthly variables on the Odoo and adjusts where necessary
2. The payroll manager reviews payroll information as advised by the HR on Odoo
3. Payroll Manager generates Payroll, sent to HR for confirms and return to Accounts
4. Group Financial Controller endorses/approve, Payroll is sent to Audit for verification
5. Audit returns verified payroll to Accounts for Management's approval
6. Payroll request is sent to GMD/CEO's final approval
7. Accounts disburse a fund for payment
8. Payroll Manager credits employee's bank accounts directly
9. Payroll vouchers are posted, journals passed and filed

Process Flow Diagram

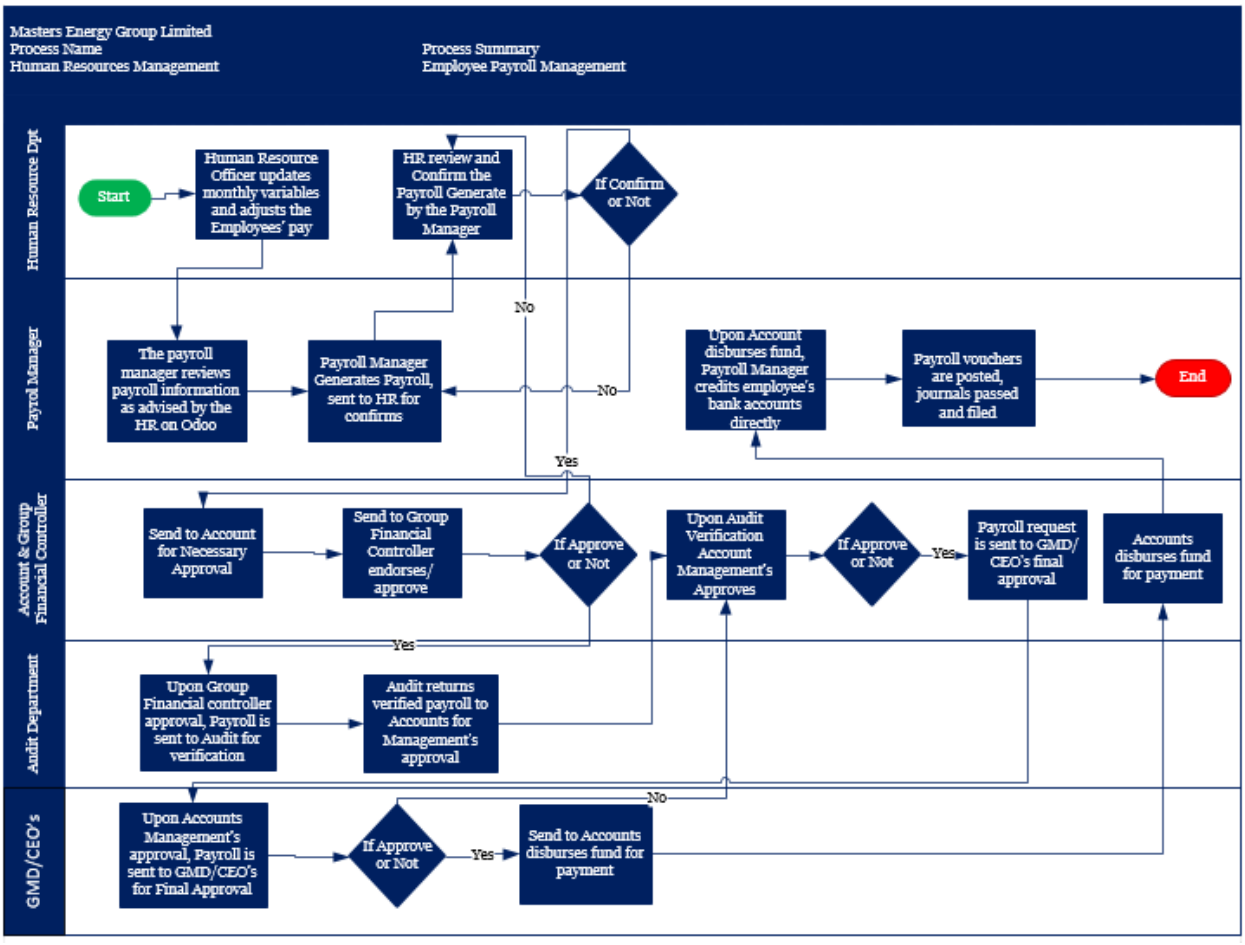

Fig 3: Employee Payroll Management

Master Data Required/Setup Information

Modules Required

1. Human Resources Module

Employee list

1. Employee ID/ Details
2. Employment Date

Payroll

1. Employee ID/Details
2. Employee Bank Detail
3. Employee Earnings
4. Salary Scale

Roles Involved in the Process Flow

1. Managing Director
2. Human Resource Officer
3. HR/Admin Manager
4. Accounts Officer
5. Admin Officer

Reports

1. Payslip
2. Payroll Schedule
3. Confirmation of Employment Letter
4. Asset Verification List

HUMAN RESOURCES:

- ✓ Manage all management and factory employees on the system.
- ✓ Manage the company's recruitments process on the system.
- ✓ The system should allow notes to be attached to each applicant during the "phone call interview" stage
- ✓ Manage the 6 months confirmation period on the system.
- ✓ Manage four types of contracts.
- ✓ Manage the appraisal process on the system.
- ✓ Manage appraisals twice a year.
- ✓ Manage different appraisal forms for different categories of employees.
- ✓ Appraisals should be managed with KPIs set in the system.
- ✓ Manage different types of leave on the system.
- ✓ Allow leave application after the first anniversary of joining the company.
- ✓ Manage two-level approvals for leave requests (Line manager & HR manager).
- ✓ Manage overtime on the system
- ✓ Manage loan requests on the system.
- ✓ Allow the system to keep a record of loan repayment.
- ✓ Allow 0% interest on loan repayment
- ✓ Compute monthly payroll using the company's manual/policy on attendance.

- ✓ Enable all employees' access to print payslips.

Manufacturing/Processing Management

Business Process Description

Odoo offers manufacturing modules to manage production for MEG.

Key Processes

1. The requisition form is generated by the processing department and for HOD's approval.
2. Upon HOD's approval, the form is sent to the audit department for approval
3. Upon audit's approval, form is sent to plant manager for approval
4. Upon the plant manager's approval, the form is sent to the warehouse.
5. Warehouse releases the item to the processing department
6. QC checks the quality of items before confirming movement
7. Upon release of the item, the warehouse department validates to post the entries.

Process Flow Diagram

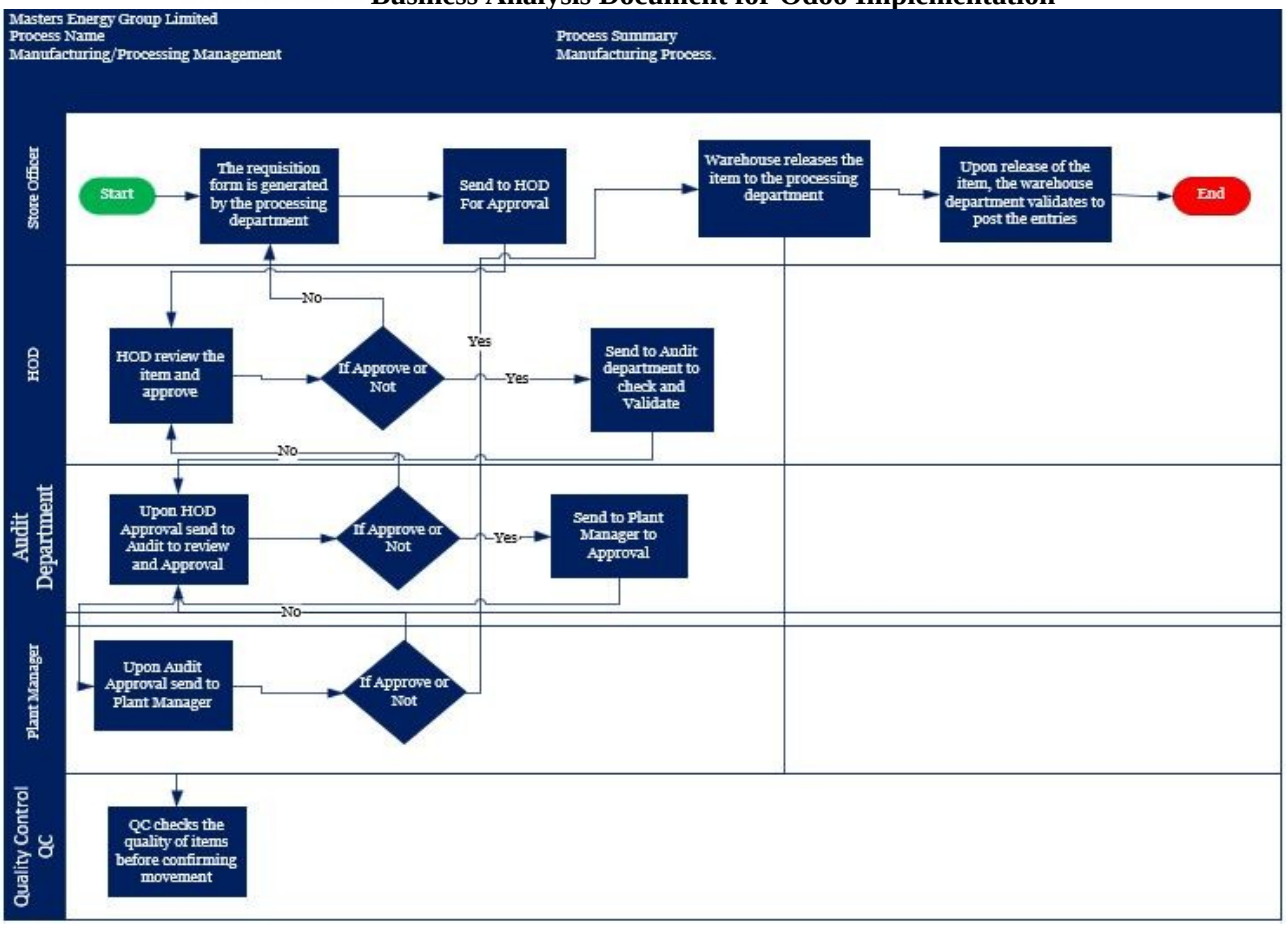

Fig 4: Manufacturing Process

Production Process

Production process goes through the below route

- Mixing
- Roller
- Fryer
- Presser
- Quarantine

1. When items are produced, QC conducts checks on all produced items after packaging.
2. A transfer note is raised by the processing department to HOD
3. Note is sent to the audit department for approval
4. Upon the audit department's approval, the note is sent to Plant Manager for final approval.
5. Upon the Plant Manager's approval, the process continues to the production manager to validate and send all manufacturing items to the warehouse.
6. Warehouse receives and validates the item.

Process Flow Diagram

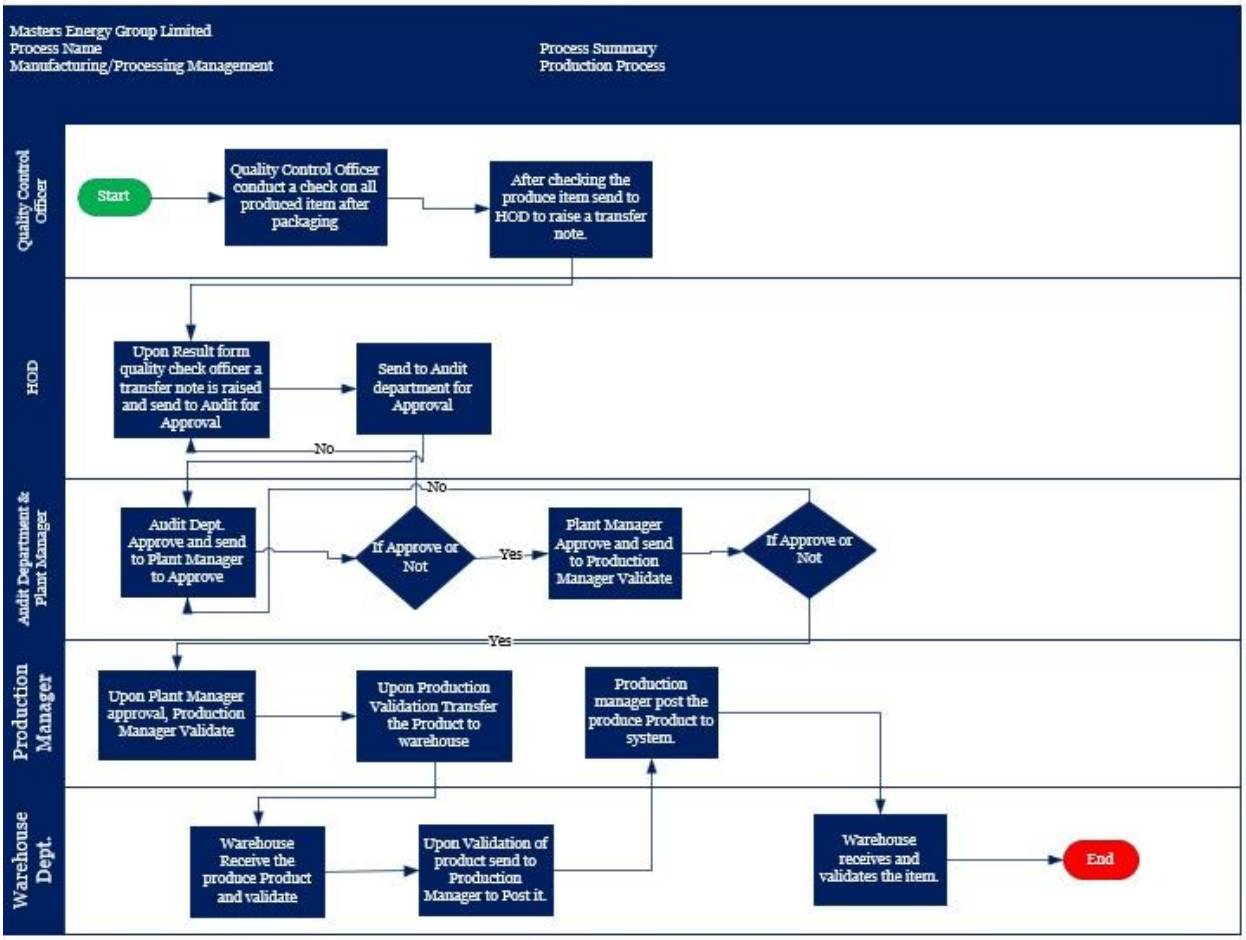

Fig 5: Production process

Master Data Required/Setup Information

Modules Required

1. Manufacturing Module

Roles involved in the process flow

1. Production Officer
2. Quality Control Manager
3. Head of Department
4. Plant Manager
5. Warehouse Manage
6. Audit Manager

Report

Receipt of raw material.

Note:

For raw materials, the QC department has a list of checks they carry out per product, the room should be created for these checks and validation of the process

by the head of the department before the warehouse officers are allowed to process the items after all the approver processes as stated above for the receipt of raw materials.

QC also has checks after and during the production process, the list of items would also be made flexible so that they can add the checks and validate results after the process is completed.

QC also carries out regular checks for other items, there should be a module created for the quality checks department for this purpose.
Please note that samples are taken from the store through requisition and stored in the QC department.

Procurement Management

Business Process Description

The procurement department of Masters Noodle and Food Processing oversees the procurement of raw materials, consumables, fixed assets, and services from vendors. Vendors are sourced for; prices that are negotiated for the items. The department also maintains and manages the vendors' databases.

Records of the prices, the types, sizes, and specifications of the items purchased are kept in a repository. Managing price negotiation with old vendors involves checking repositories; compare the current price given by the specific vendor with the initial price that is in the repository.

Key Processes

Manage vendor Registration

A vendor Form with a vendor name will be created for each vendor. Information relating to a vendor will be stored in the vendor form, and all entries relating to the vendor will be viewed from this form.

Key Task Perform

1. Procurement Officer sources for vendors and gets their detailed information.
2. Procurement Officer creates the new vendor upon vendor details collected from the vendor.
3. Procurement Officer sends the new vendor records to the HOD for review and approval.
4. HOD reviews vendor records and approves.
5. Upon HOD's Approval, the request is sent to the Audit department to verify the vendor's details supplied.
6. Upon the Audit department's verification, a request is sent to the procurement officer for a final approval.
7. Upon Procurement Officer's final approval, vendor details are confirmed and saved to the database.

Process Flow Diagram

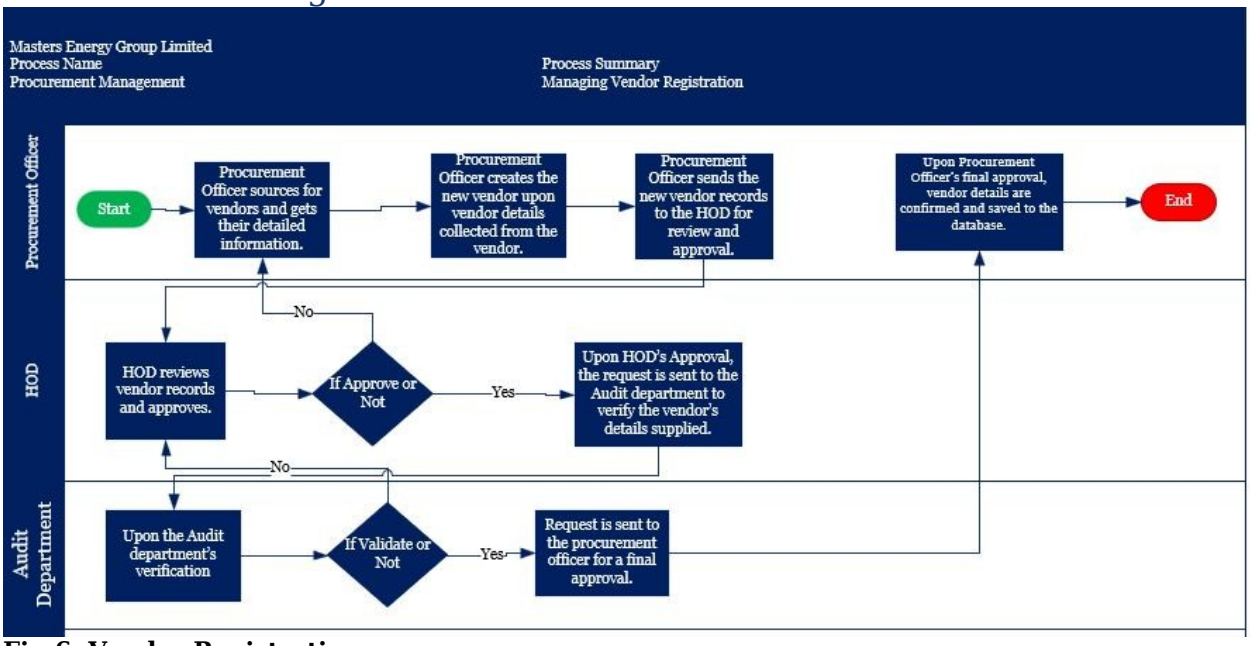

Fig 6: Vendor Registration

Procurement Process and Store Requisition

For MEG, the User Department Identifies the need for procurement and initiates a request for items from the store to obtain them by raising requisitions to the store. A requisition form will be made available on the Odoo to deliver the process. This process facilitates the prompts processing of store requests.

Key Task Required

1. Staff request for an item from the store by raising store requisition.
2. Staff sends this requisition to HOD for Approval
3. Upon HOD's approval, the system routes the requisition to the Store Officer to confirm the availability of items.
4. Upon availability of the item, a request is sent to the audit department for approval.
5. Upon audit departments' approval, a request is sent to the plant manager for final approval before the release of the item.
6. Upon plant, manager approval sends to Store officer to release/ issues the item to the requester.
7. If not available in-store, Store Officer initiates the Purchase Requisition process to replenish the stock and to HOD for approval.
8. Upon HOD's approval, the request will be pushed to the procurement officer for purchase.
9. Consequently, the Procurement Officer raises a purchase quotation upon user request.
10. Receive different Vendor quotations and select the best three vendor prices.
11. Send the quotation for approval through the HOD.
12. Upon HOD's approval, a request is sent to the audit department for validation.
13. Upon the Audit department's validation, the request is sent to the plant manager for approval.
14. If the PO value is less than #100,000 then the plant manager approves the final PO.
15. Then the Procurement can generate an invoice for the vendor.
16. If the PO is greater than #100,000 then the plant manager sends it to the Group Audit to approve.
17. Upon Group Audit approval send to Executive Director (ED) to approve.
18. Upon Executive Director (ED) Approval send to Group Managing Director (GMD) for final approval.
19. After GMD approves, the PO is validated and an invoice can be generated for the vendor by the procurement officer.

CRM & Sales Order Management

Business Process Description

The objective of this process is to ensure that the salesperson sells the item/product to the customer base on what the customer wants to buy and ensure that payment is confirmed.

Key Processes:

Business Development/Sales Department

The MEG Business development unit generates leads that are converted to opportunities through different sources most of which are calling, visitation to new shops/supermarkets, and market or referrals.

1. Orders are received daily by the Sales department
2. Send to account department for payment confirmation.
3. Sales admin would raise an order on behalf of customers.
4. Authority to load is generated by the inventory officer
5. Generated document (authority to load) is approved by Internal Audit.
6. Upon internal audit validation, the product salesperson will generate the customer invoice.
7. The salesperson will issue an invoice for the customer.

Process Flow Diagram

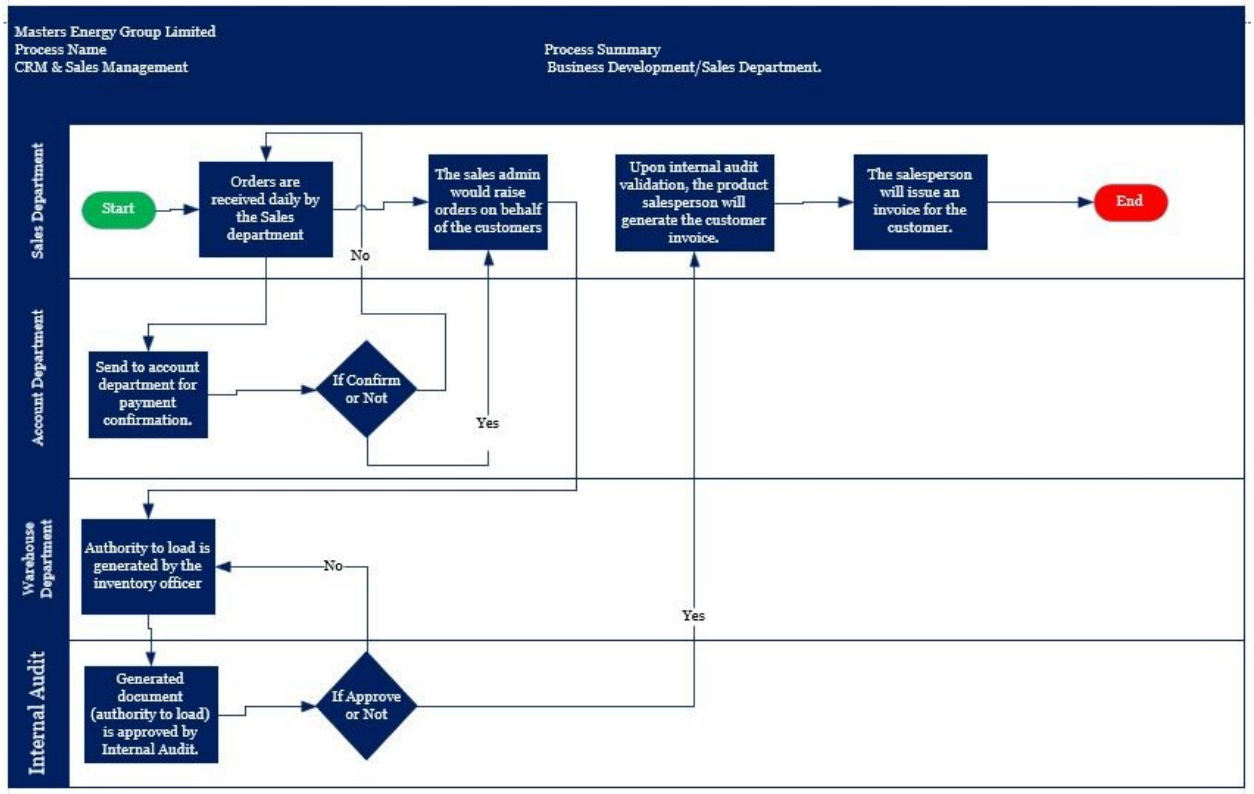

Fig: 8: CRM/Sales Order Management

Daily Sales

For secondary distribution, the trucks should be set up as Mini warehouses, after the daily outing, items not sold can be reconciled and moved back to the warehouse.

Key Processes:

Create a mini-warehouse for every truck
Transfer product from mini-warehouse to trucks
For internal movement of items from the store,

1. A requisition booklet is raised from the sales department,
2. passed to the head of sales department for approval,
3. then to audit for confirmation, followed by
4. the Plant Manager for final approval before
5. the items are finally released and a transfer note generated
6. Upon return, Send to audit department for Approval
7. Upon Audit's Approval send to warehouse Approval
8. Upon warehouse Approve transfer back to the warehouse

4. Warehouse/Store Department.

Warehouse Management

Business Process Description

This business process describes the various activities performed by the Store Keeper to ensure that the product supplied by Vendor is complete, well arranged, know when to place an order for a new supplier if the product is getting out of stock.

The objective of the storekeeper is to ensure proper recording and tracking of all products that are taken out.

Key Processes:

Warehouse Officer

of the warehouse, Arrange Products, raise report when some product is getting out of Stock.

Key Task Performed

1. The user department initiates a request from the warehouse department.
2. Upon initiating the request, it is sent for approval to the head of department.
3. Upon HOD's approval, the request is sent to the Audit department for approval.
4. Upon audit's approval, the request is sent to the Plant Manager for approval.
5. Upon the Plant Manager's approval, the request is sent to the warehouse for the item to be released to the requester.

Process Flow Diagram

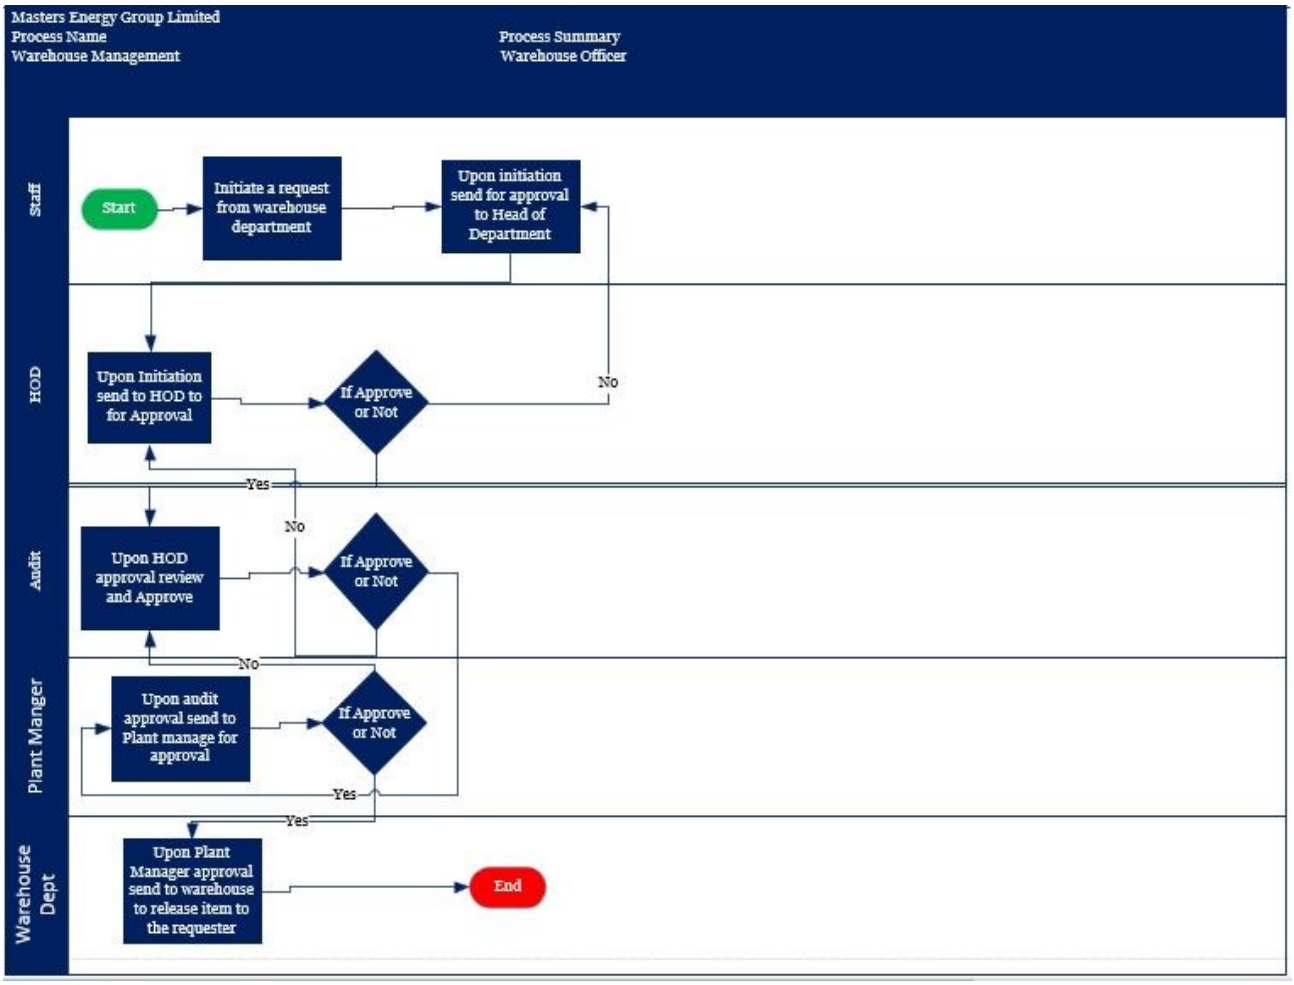

Fig 10: Warehouse Management

Scrap/Damaged Items

1. Store Officer aggregates items and raises a scrap form for all the item that needs to be scrapped
2. Upon raising a scrap form, the request is sent to the Head of Department for approval
3. Upon HOD's Approval, the request is sent to the Audit department to do a check/count and then the request is validated
4. Upon Audit department validation, the request is sent to the Terminal Manager for approval.
5. Upon Terminal manager's approval, the request is sent to the store officer to scrap item or issue to scrap location

Process Flow Diagram

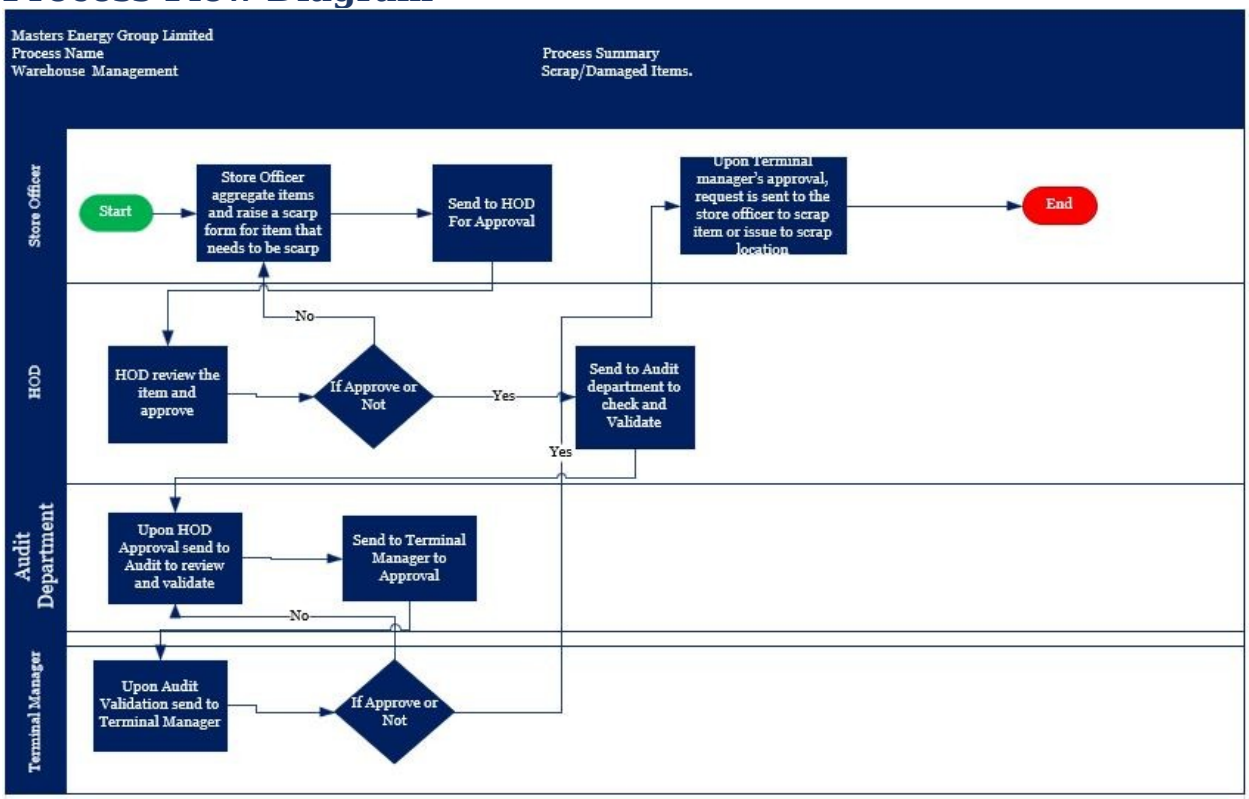

Fig 11: Scrap Process

Master Data Required/Setup Information

Modules Required

- ✓ Inventory Module

Store Keeper

- ✓ Store Officer ID/Name

Reports

- ✓ Store details report
- ✓ Scarp detail report
- ✓ Inventory report

Note:
Re-order levels are set for all products and notifications should be set if items hit the minimum level.
There should be a separate warehouse for spare parts.
There are no serialization of items or products in Masters

FIFO costing method should be used for stock valuation but some items can also be valued in Weighted Average.
Inventory count should be available in the system and after each count, variances should be treated, transferred to HOD for approval, then to Audit before moving to the Plant Manager for final approval.
Stock card report is very important to them.

Issuing Products: If products are going to the customer, after the delivery order (Release note) is generated from all approvals, this goes to the audit department for confirmation, then to the Plant Manager for final approval before the release is validated and Release note (Delivery order) is printed.

For internal movement of items from a store, a requisition booklet is raised from the initiating department, passed to head of department for approval, then to Audit for confirmation, then to Plant manager for final approval before the items are finally released and a transfer note generated.

Maintenance Management

Business Process Description

This business process describes the various maintenance activities performed by the maintenance officer to ensure that repair is carried out properly and periodic maintenance should be taken note of for preventive measures.

Key Process:

Maintenance Officer

The objective of the maintenance officer is to carry out repairs and maintain periodic maintenance for preventive measures.

Key Task Performed

1. User department initiates a repair or maintenance.
2. Send to HOD for approval.
3. Upon HOD's approval, the request is sent to the Audit department for confirmation.
4. Upon the Audit department's confirmation, send the request to the Plant Manager for approval.
5. Upon the Plant manager's approval, the request is sent to the maintenance officer to proceed with the repair.
6. After the maintenance officer has processed the repair, a request for the item to complete the repair is needed.
7. Maintenance officer sends a request to the store officer for the item needed to complete the task.
8. Item request is sent to HOD for approval.
9. Upon HOD approval, the request is sent to the Audit department for confirmation
10. Upon Audit confirmation, the request is sent to the plant manager to approve

11. Upon the Plant manager's approval store officer issues the item to the maintenance officer.
13. Maintenance officer then repair, when the repair is fully carried out/ completed.
14. Upon the Maintenance officer completes the task the user department that initiates the request should change the status to completed.
15. Upon repair status is complete the user department should approve as complete.
